

ESCO Energy Services

Applus+ is a global energy service company offering a portfolio of energy efficiency services and energy efficiency management solutions to optimise our clients' energy and economic consumption.

THE Applus+ SOLUTION

Applus+ offers energy efficiency management services at all stages of a project, from the design and construction of client facilities to the use of energy within existing facilities. We finance projects to deliver reductions in energy consumption and greenhouse-gas emissions, while ensuring the availability, safety, quality and reliability of the energy supplies provided to the client. Applus+ Norcontrol ensures a decrease in the current energy invoice, reducing the price per kWh by exporting to co-generated energy.

We offer energy advisory and consultancy services tailored to each client, and the teams of highly skilled professionals at Applus+ have a broad experience in delivering projects for energy efficiency management. Applus+ Norcontrol has laboratories that certify the quality of the technology to be implemented in energy saving projects for lighting. We are rigorous in ensuring that both the technical claims made by manufacturers and the specifications required for the project are met.

Our fields of expertise in industrial energy efficiency include lighting (interior, exterior and street lighting); co-generation, micro-generation and tri-generation; thermal power facilities (generation equipment, distribution and pumping system, terminal elements); and renewable energies (generation systems using renewable energies).

Key customer benefits

As a leading energy service company, Applus+ can provide wide range of energy management and energy efficiency services, which include:

- Cost reduction and control
- A guaranteed reduction in the energy invoice
- A comprehensive energy-efficiency solution from our participation in all phases of the project: design, construction, maintenance, management and operation
- Risk-free for the client because Applus+ takes on the investment risk and share the savings with our clients
- Quality certification of the technology to be implemented in energy-saving lighting projects
- Modernisation and improvement of the client's facilities without the need for investment, by financing the actions through the resulting saving
