

Energy Technology and Renewable Energies

Engineering development within the scope of energy efficiency and renewable energies.

THE Applus+ SOLUTION

Applus+ provides the following range of services:

- Engineering development: concept design, feasibility studies, preliminary project drafts, initial projects and construction projects
- Construction project management
- Re-engineering and optimisation of existing processes, from both a functional and energy point of view
- Project management
- Turnkey construction
- Projects adapted to every specific scenario
- Comprehensive management of administrative processing: city licences, regional departments of industry, the environment, river-basin authorities, etc.

Target customers

This service is aimed at industrial energy consumers; industries interested in renewable energies; industries interested in cogeneration and trigeneration; and energy service companies. In general, it is of interest to any industrial facility, especially those with high energy demands.

Key customer benefits

Applus+ offers its clients a comprehensive project-management service – from civil work to services, including technology, mechanical work, electrical work, automation and
