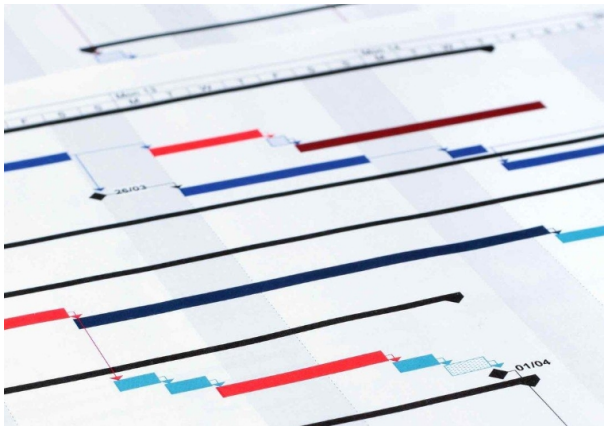
TIC Project Management

The TIC project management services developed by Applus+ are backed with the knowledge from within one of the leading testing, inspection and certification companies. Our TIC project management services assist clients to fulfil their legal requirements quickly and efficiently while remaining free to focus on their core activities.



THE Applus+ SOLUTION

Applus+ supports client companies by taking over their NDT management, asset inspections or certification elements of their projects.

Managing projects that involve testing, inspection and certification (TIC) can be a challenge and, therefore, the TIC project managers at Applus+ have in-depth knowledge of this field in addition to their extensive experience of project management. When one of our project managers joins your project, the services in TIC project management from Applus+ back the clients' assigned TIC expert with a whole body of NDT management specialists who can assist you with the requirements of your project.

As one of the leading TIC industry companies, the project managers at Applus+ bring together a wide team of specialists to help predict the challenges within a project, and bring the know-how to help you meet them successfully. Our TIC project managers ensure that the appropriate subject experts are connected with your project.

Our project managers understand how TIC obligations can impact on your project – industrial norms and legislation in general – and our services help deliver TIC project management plans accordingly. In addition, our technicians also know which resources to draw from to deliver high-quality, cost-effective and timely results.

Target customers

The services in TIC project management from Applus+ are aimed at industrial companies that are carrying out projects with a significant non-destructive testing, inspection or certification element that they need to outsource.

Key customer benefits

By outsourcing TIC project management to Applus+, our specialist TIC company services offer clients the following benefits:

- Access to our extensive knowledge of NDT management and applicable industrial norms and legislation – as well as specialist personnel with technical NDT qualifications
- A client's in-house manager can focus on the company's core competencies
- Reduced delivery times
- Increased cost control
- Increased quality control
