

Environmental Monitoring and Assessment

The environmental monitoring services at Applus+ can supply, install, maintain and calibrate environmental monitoring and assessment equipment for all types of activities covering the atmosphere, water and noise.

THE Applus+ SOLUTION

Applus+ provides integrated environmental monitoring services and equipment tailored to the specific needs of each client. We supply, install, maintain and calibrate all types of atmospheric monitoring equipment (stack emissions, air quality, meteorology, etc.), water monitoring equipment and noise monitoring equipment.

The large team of highly qualified and experienced environmental monitoring technicians are based all around the world, and Applus+ can develop proprietary, customised software packages to collect and manage the resulting data.

Target customers

The environmental monitoring and management service from Applus+ is aimed at any public or private organisation generating pollutant emissions; in particular, those that need to demonstrate their compliance with environmental legislation, such as ISO 14001, or control their process parameters, such as under EISHA.

Key customer benefits

Using Applus+ to provide environmental monitoring services and assessment ensures that clients:

- Comply with all current environmental legislation (such as ISO 14001)

- Verify the condition of their installations and contamination-monitoring systems and purifiers. A network environmental monitor enables proactive remedial action to be taken when required, leading to cost savings and enhanced productivity
- Reduce their environmental risks with effective environmental monitoring systems
