

Industrial Waste Management

Businesses and public agencies are increasingly using services for waste management to reduce and to optimise how they manage their waste.

THE Applus+ SOLUTION

Applus+ provide a wide range of waste management solutions covering:

- Development and operation of waste management plans
- Definition and implementation of waste prevention and minimisation strategies
- Raising awareness of the importance of waste minimisation and improved waste management
- Feasibility studies for the implementation of management systems
- Assessment and monitoring of public waste management quality of service (QoS)

Applus+ provides comprehensive solutions for the waste management of dangerous and inert urban waste, from the planning of the process to its technical and economic optimisation.

We have 30 years of extensive experience in implementing environmental waste management strategies, both in the public and industrial domains, as well as considerable knowledge of the public agencies involved.

The experts of environmental waste management at Applus+ are a large multi-disciplinary team of highly trained professionals, coordinated at a national level and part of a global network of waste management experts.

We are skilled at developing comprehensive turnkey projects adapted to the specific needs of our customers.

Our consultancy and inspection activities in the environmental waste management sector are based on strict and certified quality references.

Target customers

Effective waste management is vital to all organisations, regardless of their sector or business activity.
