Safety Management System Certification

ISO 9001 is the internationally recognized standard for the certification of Quality Management Systems for businesses.

THE Applus+ SOLUTION

The implementation of a safety management system can make the management of occupational health and safety risks more transparent and effective, by translating risk assessments into action plans. In almost every case, companies have their systems assessed independently in order to enhance credibility.

We are accredited by the Emirates International Accreditation Center (EIAC, former Dubai Accreditation Department-DAC in accordance with international guidelines for certification body accreditation by the International Accreditation Forum.

The external audit should be conducted by an independent party such as Applus+ Velosi. We are accredited by DAC (EIAC). Initially we will carry out a review of the OHandS manuals and procedures. This review includes looking at the company's written OHandS management system and ascertaining if targets set for the management program are measurable and achievable. An on-site audit of the system is then performed to ensure that working practices follow the procedures and stated objectives and that appropriate records are kept. After a successful audit, an OHSAS 18001/ISO 45001 registration certificate will be issued.

Applus+ Velosi also provides professional training programs in partnership with an international training organization that uses competent professionals in Safety Management System. Our courses are designed to provide you with the tools you need in order to make the most of your management system.
