Code Compliance Inspections

Compliance regulations are derived from lessons learned from past experience and aim to provide industries with infrastructure knowledge, enhanced efficiencies and increased safety awareness. Numerous code bodies exist to help ensure an adequate focus on equipment and process types while supporting world-class production. The API (American Petroleum Institute), AWS (American Welding Society), STI (Steel Tank Institute) and NACE (National Association of Corrosion Engineers) provide but a few of the recommended practices adopted throughout the world's energy sectors.

THE Applus+ SOLUTION

Applus+ has developed tried-and-tested methodologies to support its clients in achieving compliance with a wide range of standards and codes all around the world. Either using internal customer data-management systems or through our own IDMS solutions, Applus+ has amassed a vast bank of knowledge and experience in various industries to ensure client success. Our wide geographical base also provides our clients with access to competent, highly trained inspectors within reasonable mobilization times, helping to take the stress out of code enforcement.

Target customers

Code enforcement inspections are a compulsory requirement in the vast majority of industries.

Key customer benefits

Some of the advantages of partnering with Applus+ to ensure code compliance are its:

- Extensive code and industry knowledge

- Specialist internal data-management systems
- Highly trained, certified personnel across multiple authorities
- Methodical inspection methods and practices
- Customer-training services
- Same-day availability near most areas of established industry
