Consulting and
Environmental Services

2026

Our environmental services

We provide comprehensive consulting and technical assistance solutions. To this end, we have the most advanced technological means that, added to the quality, knowledge and experience of our technical team, allow us to offer a differentiated service, adapted to the needs of each client.

Our participation in the most important groups and forums of environmental experts, as well as our capacity for permanent evolution and innovation, allows us to always be at the forefront of our sector.

Environmental Management and Sustainability

Management Systems and Outsourcing

Technical advice on the establishment of management models to structure organizations with the main objective to achieve continuous improvement. Our Outsourcing service allows companies to focus on their business and leave the management of their systems or support processes in the hands of a specialized organization

Climate Change, Carbon Footprint and Environmental Footprint

Assistance in the implementation of more sustainable and efficient production strategies and models to reduce greenhouse gases (GHG) derived from activities and services, as well as in the inventory, quantification and monitoring of GHG emissions from organizations, events and products (Carbon Footprint). The environmental footprint quantifies the direct and indirect environmental aspects generated by the activities, determining what is the "environmental footprint" in the different media (atmosphere, waste, water,...).

Environmental Risk Analysis

Identification, prevention and management of the environmental risks of an activity in accordance with Environmental Liability Directive in Europe. Saudi Arabia's Vision 2030, the UAE's Net Zero 2050 and the Framework law to the countries to control environmental risks in LatAm. Environmental Damage, as well as the calculation of the financial guarantee which must be constituted by the companies affected by the aforementioned Law.

Circular Economy

We help our clients in the development of production and consumption models that involve sharing, renting, reuse, repair, refurbishment and recycling of existing materials and products as often as possible, thus creating added value that allows us to extend the life cycle of products.

Waste Management and the Natural Environment

Waste Management

Definition of solutions for the optimization of waste management, transforming the current problems faced by different administrations and business organizations into opportunities.

We provide comprehensive solutions for the management of waste, both urban and hazardous or inert, from planning to the technical and economic optimization of the processes involved.

Natural Environment

Advising on the environmental implications associated with business initiatives and the execution of projects, from the moment of decision making on their feasibility to the start-up and operation of the facility or infrastructure. We carry out the necessary studies and work so that all economic activity is premised on the consideration of sustainable development in all its phases, complying at all times with the obligations arising from the applicable environmental standards.

Natural Capital. Studies on Corporate Ecosystem Services

We help managers develop strategies to manage the business risks and opportunities that arise from their organizations' dependence and impact on ecosystems, thereby incorporating ecosystem services into the organization's decision-making processes. To do this, we assess the ECOSYSTEMIC SERVICES that interact with the organization (fresh water, wood, climate regulation, protection against natural hazards, erosion control and leisure), prioritize them and then identify risks and opportunities for the business.

Waste Management and the Natural Environment

Biodiversity plans and baseline calculation

We define strategies for the conservation of the environment and the minimization of impacts, and the establishment of monitoring indicators (Biodiversity Plans). We perform prior quantitative calculations of the "state of the environment, to establish a reference point that allows us to objectively assess the effect and the effectiveness of the implemented plans (Baseline).

Contaminated Land

Comprehensive solutions for the diagnosis and recovery of degraded spaces, to ensure optimal conditions that allow any use or activity to be carried out in these places, free of any environmental risk.

Environmental Inspection

Environmental Inspections

We have first-class technology and facilities, capable of offering a differentiated service of the highest quality.

- Stack emissions tests
- Ambient air monitoring
- Noise
- Soils
- Water
- Waste
- Odour monitoring
- Weather

Accreditations:

ISO/IEC
17020

ISO/IEC
17025

Corporate Social Responsibility

Responsibility in business management

Assistance in the integration of responsibility criteria in business management, formalizing policies and models environmental, social and economic management, and transparently reporting results achieved

Benefits of our processes:

- **Revalue** the company's intangibles
- **Bring Value** to Stakeholders
- **Generate Investor** and Market Confidence
- **Improving productivity** through social policies tailored to the needs of workers

Technical and Legal Services

Legislation Update Service - S·A·LE·M

Personalized, online information and updates on environmental legislation, energy efficiency, safety industrial and occupational risk prevention, food safety and quality.

National and International Legal Advice

LEGAL ADVICE:

Personalized and specialized legal advice and assistance provided by our team of lawyers with Extensive experience in the areas of environment, occupational and industrial health and safety, energy efficiency, quality and food safety.

ASSESSMENT OF LEGAL COMPLIANCE:

S·A·LE·M

Training

In-company, open and collaborative/concerted courses

Continuing training

We offer technical courses and conferences designed to increase the company's competitiveness. The contents have been meticulously prepared based on the real experience acquired by our professionals.

Tailor-made training

A customized process in which the gaps of training of the company/person, advice and training appropriate to their needs is provided. It can even be performed at the customer's premises.

Face-to-face training

Blended training

E-Learning

ApplusNet: O campus online da Applus+ Formação

LDAR Program

Leak Detection And Repair
Leak Detection and Repair

INSPECTION

- Component Identification
- Definition of leakage
- Leak monitoring

MAINTENANCE

- Leak repairs
- Priority repair program
- Verification remonitoring

ACTION PLAN AND PROGRAM

- Recording and processing of data
- Reports
- Software
- Decision-making support

More than 25 years of experience, with the best equipment, proprietary software and well-trained teams, for the collection and processing of qualitative and quantitative data in situ.

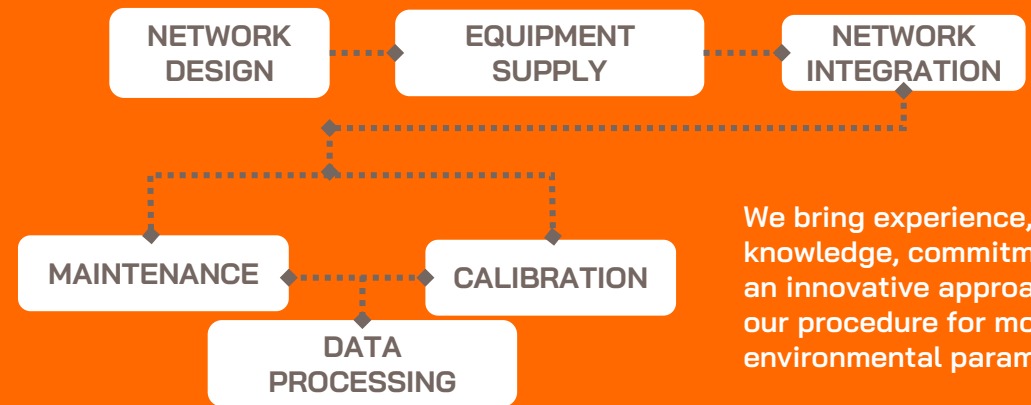

FEMA+

Our specialized fugitive emissions platform for simple data collection, handling, visualization, and control

RACA

Automatic Environmental
Control Networks

We bring experience, knowledge, commitment and an innovative approach to our procedure for monitoring environmental parameters.

We use environmental modelling tools and proprietary Applus+ software:

- **AIDA:** Plant data acquisition for air quality
- **CARMEN+:** Integration and management of environmental data.

ambiens  suite®

Our specialized environmental data platform for simple collection, handling, visualization, and control from different sources
