DU400
Remotely operated aerial inspections.
DU400
Remotely operated aerial inspections.

DU400
ROAV's are on the verge of revolutionising inspections of hard to reach structures. The DU400 is specifically designed for inspection of hard to reach metal structures such as flare stacks and power lines.

Our highly experienced inspectors provide you with comprehensive inspection reports based on accurate visual and thermal data. Our repeat inspections will contribute to the increase in your facilities' productivity, quality and safety through an integrated management system, which allows prolonging their life cycles and reducing their maintenance costs while minimising downtime.

Visual inspection of:
- Flare stacks
- Overhead power lines
- Wind turbines
- Oil rigs
- Chimneys
- Cooling towers

Benefits:
- Minimized downtime.
- Online inspection.
- Highest level of health and safety.
