Corinthian Helmet X-Ray

The digital portable x-ray equipment can be used to reveal details of paintings and artwork.

The out coming details of the inspection can assist in determination of revealing brushwork, hidden layers, ghost images etc.

To understand the establishment of an artefact the technique also helps to reveal the inner construction of an art piece or even a painting. An X-ray can help determine the best way to preserve the piece, understand how it was made and whether it has changed or deteriorated over time. It is also a useful tool in evaluating authenticity and whether parts were added later.

The wireless digital detector panel will be positioned with a pulsating X-ray tube that produces minimal ionizing radiation. This DDR system ensures that a digital radiographic image is made on the digital imaging plate, which will be sent wirelessly to the computer..... This ensures that there's no need for chemical development of an X-ray film and the results are provided directly.

Compact, portable and safe

The equipment is compact, portable and allows us to work in places which offer difficult access, requiring a minimum precautionary measures.

As a **Global leader**, we have the technology, human capabilities and resources to meet the demands of industry. No matter the size, scale or scope of the work, we always go beyond standards by delivering operational excellence with local knowledge and global competence.

We are dynamic organisation; problem-solvers by nature. Where there is no existing answer to a challenge or problem, we will use our vast experience and in-depth knowledge to find one. By working closely with our clients, we have become a **Trusted partner** who delivers new, innovative solutions with highest of integrity.

A **Passion for improvement** drives our teams to safeguard client operations while delivering our services. We innovate to bring about advances in operational safety and this commitment to excellence is what makes us renowned as one of the best.
